ing clinical practice on a meta-analysis result it is important to read beyond the statistic and make sure it is not the result of combining incomparable trials.

We would like to acknowledge the support of the Wellcome Trust who have funded Dr Lecky's research fellowship, and Mrs C Cooke for secretarial support. Permission was kindly given by the BMJ to reproduce the figs 1, 2, and 6, which were previously published in that journal, by the SDD trialists for figs 1 and 2, and George Davey Smith et al for fig 6.

ADVANCE NOTICE

MID-TRENT PAEDIATRIC TRAUMA CONFERENCE

JUNE 2nd and 3rd, 1997
Venue: NOTTINGHAM

This two day conference, addressing the challenges, controversies and future of paediatric trauma management, will feature local, national and international speakers.

MAKE A NOTE IN YOUR DIARY!
BOOKING DETAILS AVAILABLE EARLY 1997
bolystic treatment appropriately. The widespread introduction of ALS courses and the adoption of local guidelines may improve training and guidance for junior hospital doctors in a key area of clinical practice.

---

ADVANCED LIFE SUPPORT GROUP

Major Incident Medical Management and Support Courses: to be held in various centres throughout the UK in 1997. This is a three day course in “life support style” designed to train health service personnel to provide an effective response at a major incident.

Fee £300.00

Advanced Paediatric Life Support Courses: to be held in various centres throughout the UK in 1997. This is a three day course designed to provide training which will enable doctors and nurses to deal efficiently with all paediatric emergencies. The course is modular and has sections on paediatric resuscitation, serious illness and serious injury.

Fee varies according to centre. Range £300.00 - £350.00.

Inquiries for both courses to:
Jenny Antrobus
Advanced Life Support Group
Second Floor, The Dock Office,
Trafford Rd., Salford Quays,
Manchester M5 2XB
Tel 0161 877 1999
Fax 0161 877 1666

see panel on page 430
Correspondence on this topic and further contributions to the series are welcomed.

Referees for the Journal of Accident & Emergency Medicine

All papers submitted for publication in the Journal of Accident & Emergency Medicine undergo peer review. As a result of the continuing rise in the number of papers received the Journal seeks additional referees.

This is an interesting and stimulating activity. The Editorial Office ensures that the workload for referees is not onerous and guidelines are provided to allow a structured critique of each paper. Referees are expected to return comments within three weeks of receipt of the manuscript.

Please contact the Editor, Journal of Accident & Emergency Medicine at BMA House, Tavistock Square, London WC1H 9JR, telephone 0171-383-6795, fax. 0171-383-6668, stating your present appointment and any areas of special expertise. Reviewers are particularly welcome from other specialties with an interest in Emergency Medicine and from outside the U.K.

<tbody>
<tr>
<td>Advanced Paediatric Life Support UK</td>
<td>Approximately 30 courses per year in 18 locations throughout the UK</td>
</tr>
<tr>
<td></td>
<td>This is a 3-day course teaching the immediate and first hour management of children in need of resuscitation, seriously ill children, and injured children. The course is available to doctors, and a parallel course is also offered to nurses involved in the acute management of ill and injured children.</td>
</tr>
<tr>
<td>Advance Life Support</td>
<td>2½-day weekend twice yearly</td>
</tr>
<tr>
<td></td>
<td>This is a 2½-day course, teaching all aspects of the management of cardiac arrest. The course is available to any health care workers working in specialties where they are likely to encounter cardiac arrest.</td>
</tr>
<tr>
<td>Advance Trauma Life Support</td>
<td>3-day weekend six times yearly</td>
</tr>
<tr>
<td></td>
<td>This is a 3-day course, teaching all aspects of the management of multiple injured patients in the early stages after injury. The course is available only to doctors. Non-medics may apply as “observers” for a nominal fee.</td>
</tr>
<tr>
<td>Major Incident Medical Management and Support</td>
<td>Increasing number in various locations</td>
</tr>
<tr>
<td></td>
<td>This is a 3-day course, teaching all aspects of the management of major incidents. The course is available to doctors and nurses working in specialties where they are likely to form part of a major incident team.</td>
</tr>
<tr>
<td>Advanced Life Support Group Instructors Course</td>
<td>4 times a year</td>
</tr>
<tr>
<td></td>
<td>This is a 2½-day course which teaches doctors, nurses, and paramedics how to teach on Advance Life Support courses. The course is open to candidates from Advanced Life Support provider courses.</td>
</tr>

Abdominal pain

Prognosis of elderly patients with non-specific abdominal pain, 44
Two cases of paradoanal hernia, a rare internal hernia, 64

Accident and emergency, Temporary A&E at the Whittington Hospital: letter, 230

Accident and emergency department
Do the national performance tables really indicate the performance of accident and emergency departments? 123
Hospital or general practice? Results of two experiments limiting the number of self referrals of patients with injuries to hospitals in The Netherlands, 264
Not the nine o'clock news: personal view, 363
Satisfaction with the accident and emergency department - a postal survey of general practitioners' views, 280
Should accident and emergency nurses request radiographs? Results of a multicentre evaluation, 86
Temporary A&E at the Whittington Hospital: letter, 230
The accident and emergency department as a single portal of entry for the reassessment of all trauma patients transferred to specialist units, 91 letter, 365
Accident and emergency hospital data, Collection and local use of accident and emergency hospital data in England, 23

Accident and emergency medicine

Education in accident and emergency medicine for senior house officers: results and recommendations, 238
Management issues in accident and emergency medicine: leader, 372
Reviews in accident and emergency medicine: the past and the future, 149
Accident and emergency observation ward, Managing patients with deliberate self harm admitted to an accident and emergency observation ward, 31 letter, 432
Accident and emergency patients, What information do general practitioners want about accident and emergency patients? 406
Accident and emergency ward, Critical analysis of an accident and emergency ward, 325
Accident prevention
An accident and emergency based child accident surveillance system: is it possible? 116
Collection and local use of accident and emergency hospital data in England, 23
Accidents, An accident and emergency based child accident surveillance system: is it possible? 116
Acute abdomen, Two cases of paradoanal hernia, a rare internal hernia, 64
Adder bites, Incidence, pathology, and treatment of adder (Vipera berus L.) bites in man: review, 346
Admission, Hydrochloric acid inhalation: who needs admission? 422
Adrenaline, Adrenaline, cardiac arrest, and evidence based medicine: review article, 234 letter, 433
Adrenaline/cocaine, Topical anaesthesia for children's lacerations: an acceptable approach? 119
Absorbed tetanus toxoid, Patients' understanding of tetanus immunisation, 272
Advanced life support courses Advanced life support courses: letter, 149
Teaching advanced life support skills: letter, 229
Advanced Life Support/Advanced Cardiac Life Support classes, Comparison of cardiopulmonary resuscitation techniques using video camera recordings, 198
Advanced trauma life support, Fluid resuscitation in traumatic haemorrhage: letter, 591
Afghanistan, Antipersonnel mines: who are the victims? review, 343
Alcohol, Does alcohol contribute to accident and emergency department attendance by elderly people? 258
Alcohol abuse, The homeless in the emergency department: a patient profile, 415
Alcoholism Detection of alcohol misusing patients in accident and emergency departments: the Paddington alcohol test (PAT), 308
The detection of alcohol misuse in accident and emergency departments - grasping the opportunity, 306
Alkalised lignocaine, Alkalisation of lignocaine to reduce the pain of digital nerve blockade, 339
Allergies, Patients' knowledge about their drug allergies, 114
Aluminium ring pulls, Detection of aluminium ring pulls: letter, 151
Ambulance response, Ambulance response: letter, 231
Aminotic fluid embolism, Aminotic fluid embolism: emergency management, 285
Amphetamine Enzyme induced serotoninergic emphysema, 359
Management of drug abuse emergencies: leader, 370
Amyl nitrite, Methaemoglobinemia presenting with status epilepticus, 427
Anaesthesia, Topical anaesthesia for children's lacerations: an acceptable approach? 119
Analgiesia
A protocol to improve analgesia use in the accident and emergency department, 177
Topical analgesia for superficial corneal injuries, 186
Anaphylactic shock Anaphylactic shock: letter, 150
Anaphylaxis, Patients' knowledge about their drug allergies, 114
Angina pectoris, Respiratory compromise: a rare complication of truncutaneous electrical nerve stimulation for angina pectoris, 68
Ankle, The relevance of hearing a crack in ankle injuries, 278
Anterior shoulder dislocation, A comparison of two local anaesthetic techniques for acute anterior shoulder dislocation, 147 abt
Antipersonnel mines, Antipersonnel mines: who are the victims? review, 343
Arm-pull manoeuvre, Cervical spine imaging in trauma patients: a simple scheme of rationalising arm traction using zonal divisions of the cervical vertebrae, 175
Aspiration pneumonia, Aspiration pneumonia in a mentally handicapped patient due to a foreign body impacted in the pharynx: a near fatal outcome, 291
Assessment
Do the national performance tables really indicate the performance of accident and emergency departments? 123
Rules for collection of clinical data: the eight Rs, 127
Asthma
Asthma management in accident and emergency and the BTS guidelines - a study of the impact of clinical audit, 392
Effect of a preprinted form on the management of acute asthma in an accident and emergency department, 93 letter, 366
Oxygen saturation in adults with acute asthma, 28
Tension pneumoperitoneum, 220
Audible crack, The relevance of hearing a crack in ankle injuries, 278
Audiogram A protocol to improve analgesia use in the accident and emergency department, 177
The cost of overseas visitors to an inner city accident and emergency department, 16
The nursing triage process: a video review and a proposed audit tool, 398
The use of audit to set up a thrombolysis programme in the accident and emergency department, 49
Barely injury, Missed cervical spine injury following barfing, 222
BBC series Casualty: the BBC series - the role of the medical adviser, 299, 299
Into bed with Auntie: a multicentre evaluation of the BBC '999' CPR training roadshow, 146 abt
Benzodiazepines, Management of drug abuse emergencies: leader, 370
Bier's block, Is fasting necessary before prilocaine Bier's block? 105
Bites and stings, Weaver fish stings: a report of two cases presenting to an accident and emergency department, 139
Bleeding time, Evaluation of the effect of colloid (Haemaccel) on the bleeding time in trauma patients, 146 abt
Blood loss, The use of ultrasound in the non-invasive detection of changes in the renal circulation in response to blood loss using an animal model, 147 abt
Blood test results, Benefits of immediate printing of blood test results within an A&E department: letter, 149
Blunt trauma, Oesophageal perforation: a rare complication of minor blunt trauma, 295
Book reviews

Crystalloid, Fluid replacement during uncontrolled haemorrhage: evidence for hypotensive resuscitation and use of crystalloid, 147 abt
Cytosinosis, Methaemoglobinemia presenting with status epilepticus, 427
Cytokine production, Endotoxin translocation and cytokine production in a pig model of haemorrhage and injury, 145 abt
Cytokines, The cytokine response to critical illness: review article, 154
Data collection
Collection and local use of accident and emergency hospital data in England, 23
Rules for collection of clinical data: the eight Rs, 127
Database, An accident and emergency based child accident surveillance system: is it possible? 116
Day hospital, Mised diagnoses among elderly patients discharged from an accident and emergency department, 256
Deaths, Prehospital deaths in the Yorkshire Health Region, 248
Defibrillation, Prehospital cardiac arrest in Leicestershire: targeting areas for improvement, 251
Defibrillators, An undesirable feature in defibrillators: letter, 69
Deliberate self harm
Managing patients with deliberate self harm admitted to an accident and emergency observation ward, 31: letters, 432
Suicide rate following attendance at an accident and emergency department with deliberate self harm, 101
Demographic trends, Changing patterns in accident and emergency attenders, 269
Diabetes mellitus, Silent myocardial infarction during hypoglycaemic coma, 35
Diagnosis, Pitfalls in diagnosis and management of carbon monoxide poisoning, 62: letter, 301
Diagnostic indicators, Diagnostic indicators in the early recognition of severe cocaine intoxication, 261
Digit, Hair thread tourniquet syndrome, 138
Digital nerve block, Alkalisation of lignocaine to reduce the pain of digital nerve blockade, 139
Disaster, Disaster plan education: how we made and tested a video, 21
Dislocation, Sesamoid bone interposition complicating reduction of a zonal joint dislocation, 298
District general hospitals, The future for district general hospitals and their A&E departments: personal view, 418
Doctors, Should accident and emergency nurses request radiographs? Results of a multicentre evaluation, 86
Dog bites, Dogs, epilepsy and airways. The dog always wins: letter, 432
Doppler otorvelography, Doppler measurement of cardiac output during cardiopulmonary resuscitation, 379
Subject index
Doppler ultrasound, Cerebral oximetry and stroke distance: the future of emergency department monitoring? 313
Drug abuse
Inadvertent subclavian artery puncture in an intravenous drug abuser, 358
Management of drug abuse emergencies: leaden, 370
Drug addiction, A confused drug addict: the importance of considering sepsis, 212
Drug allergies. Patients' knowledge about their drug allergies, 114
Drug history taking, Drug history taking and the identification of drug related problems in an accident and emergency department, 166
Drug overdose, Management of drug overdoses in accident and emergency departments in the United Kingdom, 46: letters, 301, 366
Drug-related deaths, Drug history taking and the identification of drug related problems in an accident and emergency department, 166
Drug side effects, Dystonic reactions: two case reports, 221
Duplication, Duplication of information: letter, 365
Dysphagia, Aspiration pneumonia in a mentally handicapped patient due to a foreign body impacted in the pharynx: a near fatal outcome, 291
Dystonic reactions, Dystonic reactions: two case reports, 221
Ecstasy Ecstasy induced retropharyngeal emphysema, 359
Management of drug abuse emergencies: leaden, 370
Education
Disaster plan education: how we made and tested a video, 21
Education in accident and emergency medicine for senior house officers: review and recommendations, 238
Elasticated wrist splint, Skin necrosis in prolonged application of an elasticated wrist splint in a psychiatric patient: letter, 230
Elderly
Changing patterns in accident and emergency attenders, 269
Does alcohol contribute to accident and emergency department attendance in elderly people? 258
Drug history taking and the identification of drug related problems in an accident and emergency department, 166
Missed diagnoses among elderly patients discharged from an accident and emergency department, 256
Prognosis of elderly patients with non-specific abdominal pain, 44
Tetanus immunisation in the elderly population, 184
Electrocardiogram interpretation, Interpretation of the emergency electrocardiogram by junior hospital doctors, 395
Emergency callout, Hidden impact of paramedic interventions, 383
Emergency intubation, Is it safe to use preprepared endotracheal tubes in the resuscitation room? 283
Emergency medical facilities, Emergency medicine at a large rock festival, 26: letter, 305
Endorphin, Stress hormones in accident patients studied before admission to hospital, 243
Endotoxin translocation, Endotoxin translocation and cytokine production in a pig model of haemorrhage and injury, 145 abt
Endotracheal tubes, Is it safe to use preprepared endotracheal tubes in the resuscitation room? 283
Enzyme pathways, incidence, pathology, and treatment of adder (Vipera berus L.) bites in man: review, 346
Epidemiological studies, Collection and local use of accident and emergency hospital data in England, 25
Epilepsy, Dogs, epilepsy and airways. The dog always wins: letter, 432
Epistaxis
First aid treatment of epistaxis - are patients well informed? 193
The swimmer's nose clip in epistaxis, 134
Erythema nodosum, Erythema nodosum - diagnostic difficulties in the accident and emergency department, 211
Evidence based medicine, Adrenaline, cardiac arrest, and evidence based medicine: review article, 234: letter, 453
Fast track admission, "Fast tracking" patients with a proximal femoral fracture, 108: letters, 302, 367
Fasting, Is fasting necessary before prilocaine Bier's block? 105
Fatal accidents, Prehospital deaths in the Yorkshire Health Region, 23
Femoral fracture, "Fast tracking" patients with a proximal femoral fracture, 108: letters, 302, 367
Fish bone, Fish bone: letter, 230
Fish venom, Weaver fish stings: a report of two cases presenting to an accident and emergency department, 139
Fluid replacement, Fluid replacement during uncontrolled haemorrhage: evidence for hypotensive resuscitation and use of crystalloid, 147 abt
Fluid resuscitation, Fluid resuscitation in traumatic haemorrhage: letter, 361
Flurbiprofen, Topical analgesia for superficial corneal injuries, 186
Foot wounds, Plantar puncture wounds: a survey to determine the incidence of infection, 274
Foreign body
An unusual site to find a "swallowed" foreign body: letter, 304
Aspiration pneumonia in a mentally handicapped patient due to a foreign body impacted in the pharynx: a near fatal outcome, 291
Finding and removing small foreign bodies: a new technique for A&E: letter, 151
Foreign body in the hypopharynx - an unusual presentation, 292
The use of a metal detector to locate ingested metallic foreign bodies in children, 341
Fracture
Cortical bone cyst following a greenstick radial fracture, 63
The relevance of hearing a crack in ankle injuries, 278
Threow's fractures of the humerus: letter, 303, Toddler's fracture, 29: letter, 366
Funding, The use of audit to set up a thromboysis programme in the accident and emergency department, 49
Future planning, Changing patterns in accident and emergency attenders, 269
Gastrointestinal haemorrhage, Oesophageal rupture in the course of conservative treatment of bleeding oesophageal varices, 225
Gelatin based plasma substitutes, Reduced quality of in vitro clot formation with gelatin based plasma substitutes, 145 abt
General medical and surgical wards, Short stay observation patients: general wards are inappropriate, 163
General practice, Hospital or general practice? Results of two experiments limiting the number of self referrals of patients with injuries to hospitals in The Netherlands, 264
General practitioner
Primary care in London: an evaluation of general practitioners working in an inner city accident and emergency department, 11
Satisfaction with the accident and emergency department - a postal survey of general practitioners' views, 280
What information do general practitioners want about accident and emergency patients? 406
Glasgow coma score, Prehospital cardiac arrest in Leicestershire: targeting areas for improvement, 251
Glucagon, A comparison of glucagon and glucose in prehospital hypoglycaemia, 146 abt
Glucose, A comparison of glucagon and glucose in prehospital hypoglycaemia, 146 abt
Greenstick fracture, Cortical bone cyst following a greenstick radial fracture, 63
Guidelines
Asthma management in accident and emergency and the BTS guidelines - a study of the impact of clinical audit, 392
The effect of introducing guidelines for cerebral spine radiographs in the accident and emergency department, 38
Gunshot wound, Uncomplicated penetrating colonic injury, 296
Haemaccel, Evaluation of the effect of colloid (Haemaccel) on the bleeding time in trauma patients, 146 abt
Haematoma block, Hyaluronidase (Hyalase): a useful addition in haematoma block? 337
Haemophilia, A case of Munchausen syndrome with claims of trauma and haemophilia, 293
Haemorrhage
Endotoxin translocation and cytokine production in a pig model of haemorrhage and injury, 145 abt
Fluid replacement during uncontrolled haemorrhage: evidence for hypotensive resuscitation and use of crystalloid, 147 abt
Fluid resuscitation in traumatic haemorrhage: letter, 301
The use of ultrasound in the non-invasive detection of changes in the renal circulation in response to blood loss using an animal model, 147 abt
Haemorrhagic hypotension, Scalp lacerations demand careful attention before interhospital transfer of head injured patients, 207
Hair thread, The effect of affinity label the number of self referrals of patients: general wards are inappropriate, 163
Hair thread, The effect of affinity label the number of self referrals of patients: general wards are inappropriate, 163
Hiccup, An unusual cause of hiccups, 361
Hiccup, An unusual cause of hiccups, 361
Heterotopic ossification, Heterotopic ossification, 304
Hernia, Two cases of paraduodenal hernia, a rare internal hernia, 64
Hernia addiction, A confused drug addict: the importance of considering sepsis, 212
Heterotopic ossification, Heterotopic bone formation within a missile track, 227
Hiccups, An unusual cause of hiccups, 361
Subject index

439

Hip fractures, Analysis of the care of patients with fractured neck of femur at 30 British hospitals: does timeliness of admission and treatment affect outcome? 148 abstr letters, 431

History taking, Use of a psychiatric proforma for accident and emergency officers, 180

HIV-1 infection, The rising prevalence of HIV-1 infection in patients attending an inner city accident and emergency department, 424

Homeless, The homeless in the emergency department: a patient profile, 415

Trends in the use of accident and emergency services by the homeless on the Wirral, 334

Hospital staff attendances, Use of an accident and emergency department by hospital staff, 409

Humeral fracture, Throwner’s fractures of the humerus: letter, 303

Hyaluronidase, Hyaluronidase (Hyalase): a useful addition in haematoma block? 337

Hydrochloric acid fumes, Hydrochloric acid inhalation: who needs admission? 248

Hyperbaric oxygen, Pitfalls in diagnosis and management of carbon monoxide poisoning, 621 letter, 301

Hypertension, Hypertension therapy and hypertension: a comparison in injuries in stroke and diabetes patient? 119

Hyperextension soft tissue injuries of the cervical spine - a review, 3

Hypoglycaemia, A common cause of glucagon and glucose in prehospital hypoglycaemia, 146 abstr

Silent myocardial infarction during hypoglycaemic coma, 357

Hypovolaemia, Foreign body in the hypopharynx - an unusual presentation, 372

Hypotensive resuscitation, Fluid replacement during uncontrolled haemorrhage: evidence for hypotensive resuscitation and use of crystalloid, 147 abstr

Hypovolaemia, Changes in stroke distance in response to haemorrhage in a swine model, 316

Spontaneous splenic rupture: an unusual cause of hypovolaemia, 289

Immunisation, Tetanus immunisation in the elderly population, 184

Induction course, A survey of teaching and the use of clinical guidelines in accident and emergency departments, 129

Infectious mononucleosis, Spontaneous splenic rupture: an unusual cause of hypovolaemia, 289

Information, Duplication of information: letter, 365

What information do general practitioners want about accident and emergency patients? 406

Interhospital transfer, Scalp lacerations demand careful attention before interhospital transfer of head injured patients, 207

Intervention, Hidden impact of paramedic interventions, 383

Intestinal obstruction, Two cases of paraduodenal hernia, a rare internal hernia, 64

Intrathoracic lipoma, Intrathoracic lipoma masquerading as subclavian artery trauma, 287

Intravenous drug abuse, Inadvertent subclavian artery puncture in an intravenous drug abuser, 358

Intubation, Is it safe to use preprepared endotracheal tubes in the resuscitation room? 283

Ipecacuanha, Management of drug overdoses in accident and emergency departments in the United Kingdom, 46 letters, 301, 366

Junior hospital doctors, Interpretation of the emergency electrocardiogram by junior hospital doctors, 395

Kidney donors, Role of the accident and emergency department in the non-heart-beating donor programme in Leicester, 321

Lavage, Management of drug overdoses in accident and emergency departments in the United Kingdom, 46 letters, 301, 366

Legislation, Review of police inquiries to an accident and emergency department, 402

Life support skills, Prehospital cardiac arrest in Leicester: targeting areas for improvement, 251

Teaching advanced life support skills: letter, 229

Lignocaine, Alkalisation of lignocaine to reduce the pain of digital nerve blockade, 339

Hyaluronidase (Hyalase): a useful addition in haematoma block? 337

Topical anaesthesia for children’s lacerations: an acceptable approach? 119

Limping child, Toddler’s fracture, 59 letter, 366

Lipoma, Intrathoracic lipoma masquerading as subclavian artery trauma, 287

Ligation, An audit of litigation costs in four accident and emergency departments, 400

Local anaesthetic, A comparison of two local anaesthetic techniques for acute anterior shoulder dislocation, 147 abstr

LSD, Management of drug abuse emergencies: leader, 370

Major trauma, Broadsheet presentation on the management of major trauma, 200

Deaths in the Preybrook Health Region, 248

Soft tissue injury, Nail gun injury: a barbed problem, 210

Subject index
INSTRUCTIONS TO AUTHORS

**Scope**
The Journal of Accident and Emergency Medicine publishes articles on all aspects of emergency medicine. The emphasis is on original research of a high scientific standard. Papers also include review articles, short reports, case reports, and occasional papers dealing with specific aspects of emergency care. The Journal aims to represent all specialties involved in emergency care, both in the pre-hospital and in the hospital environment. It has an international readership, and articles reflecting the global perspective are particularly welcome. Authors are invited to submit any work that will contribute to the progress of emergency medicine worldwide.

**Types of paper**
Original papers (not normally over 3000 words for full length accounts of original research); Review articles (up to 4000 words, providing concise in-depth reviews of both established and new areas in accident and emergency medicine); Editorials (these are written or commissioned by the editors, but suggestions for possible topics and authors are welcomed); Short papers (short reports of experimental work, new methods, or a preliminary report can be accepted as 2-page papers; maximum length 1400 words including abstract, tables and legends); Case reports (limited to 850 words, one table or figure, and a short unstructured abstract; they should contain a brief but comprehensive literature review); Correspondence (the Editor welcomes letters which should not exceed 300 words or contain more than three references; letters should be typed double spaced with wide margins and must be signed by all the authors).

**Manuscripts**
The manuscript (three copies) should be typed double spaced throughout on A4 paper using one side only, with margins of at least 30 mm at the sides and at the top and bottom. Authors are asked to submit with their manuscript the names and addresses of three people who they consider would be suitable independent reviewers. They will not necessarily be approached to review the paper. If the manuscript is accepted, both disk and typescript will be required for the final revised version; typescript alone will only suffice if the author has no access to word processing facilities.

Manuscripts must be accompanied by a declaration, signed by all the authors, that the paper is not being considered by any other journal and that it has not been accepted for publication elsewhere. Papers are considered on the understanding that they are submitted solely to this journal and do not duplicate previously published material. In cases of doubt, where part of the material has been published elsewhere, the published material should be included with the submitted manuscript to allow the Editor to assess the degree of duplication. All authors must have participated sufficiently in the work to take public responsibility for the contents (see BMJ 1991;302:338-41).

If requested the authors must be prepared to produce the data on which the manuscript is based for examination by the Editor.

Papers reporting results of studies on human subjects must be accompanied by a statement that the subjects gave written, informed consent and by evidence of approval from the appropriate ethics committee. Such papers should conform to the principles outlined in the Declaration of Helsinki (BMJ 1964;i:177). Animal studies must be accompanied by this statement: "The investigation was performed in accordance with the Home Office Guidance on the operation of the Animals (Scientific Procedures) Act 1986, published by HMSO, London". Experiments performed by overseas authors must conform to equivalent animal protection legislation.

The Editor cannot enter into correspondence about papers rejected as unsuitable for publication, and the Editor's decision in these matters is final.

**Style**
The format must be as described in this section, although for reviews and letters to the Editor the use of subsections is flexible. Abbreviations should be kept to a minimum and must always be explained. Drugs must be referred to by their approved names. 1 **Title page**: should include the title (not more than 120 characters), a short title for running head, names and affiliations of authors (only one affiliation per author), and the name, address, telephone and fax numbers of the corresponding author. 2 **Abstract**: must not exceed 300 words and should be subdivided into four sections: Objectives; Methods; Results, Conclusions. Sections should not be combined. Statistical values should be given (confidence intervals preferred). The abstract should be followed by up to five key terms. 3 **Introduction**: outline the background and rationale of the study. 4 **Methods**: this section should be sufficiently detailed to permit the reader to replicate the study. Published methods should be described in brief, with appropriate citation. Statistical methods should be defined and any not in common use should be described in detail or supported by references. 5 **Results**: should be concise and should not contain repetition of the methods. Data in the text should not be replicated in tables or figures or vice versa. SI units should be used, except for fluid pressures which should be in mm Hg. 6 **Discussion**: a clear distinction should be made between deduction and speculation. 7 **Acknowledgements**: where appropriate. 8 **References**: the Vancouver style must be used (see papers in this issue) with citations numbered consecutively in the order in which they appear in the text, tables, and figures. List all authors when there are six or fewer; if there are seven or more, list the first six, followed by et al. Except in the case of review articles the total number of references should not exceed 40. Responsibility for completeness and accuracy of references rests entirely with the authors. References will not be checked in detail by the Editor but papers in which errors are detected in the references are unlikely to be accepted. Submitted work or work in preparation cannot be cited in the reference list. 9 **Figures and tables**: Figures will generally be redrawn or restated to conform with journal style, so they should be checked carefully by the authors. Figure legends must always be supplied and must be typed on a separate sheet. Colour illustrations may only be used if monochrome cannot show what is desired. Authors are responsible for part of the cost of colour figures. Use journal style in tables (see any issue). Do not divide tables with rules. Place brief explanatory legend at the top of the table (not on a separate sheet) and any further necessary clarification at the foot. All tables and figures must be referred to in the text.

**Proofs**
Contributors will receive one proof Only minor corrections can be made. Corrections other than printing errors may be charged to the author. It is the author's responsibility to return the corrected proofs promptly and in case of absence to ensure that the editorial office knows a forwarding address.

**Reprints**
Reprints will be charged for. The number of reprints required should be stated on the form provided with the proof.
