

Reasons and evolution of non-thrombolysis in acute ischemic stroke – supplementary tables

Supplementary Table 1: Mechanisms of stroke of non-thrombolysed and thrombolysed patients¹

	<i>non-thrombolysed patients</i> (n=2019)		<i>thrombolysed patients</i> (n=599)	
Cardioembolism	578	28.6%	201	33,6%
Small vessel occlusion	320	15.8%	24	4,0%
Likely atherosclerosis or aortic, without significant stenosis ²	303	15.0%	70	11,7%
Atherosclerosis with $\geq 50\%$ ^{NASCET} stenosis	253	12.5%	92	15,4%
Undetermined mechanism	182	9.0%	75	12,5%
Multiple mechanisms	100	5.0%	26	4,3%
Other determined	86	4.3%	22	3,7%
Dissection	75	3.7%	44	7,3%
PFO as likely cause	71	3.5%	23	3,8%

¹TOAST^[17] classification

² Ipsilateral internal carotid stenosis $< 50\%$ ^{NASCET} /risk factors for atherosclerotic disease, for details see PERFORM definition ^[18]
